Abstract :

“**ANDROID APP KOTLIN**” has been gaining popularity since it made its debut.

Android Studio is an open and free which is used to develop the android application for mobile's, TV's, Watches and other Android OS, It provides leverage the power of SQL Database and build a app that shows items added by user.

Objective :

The goal of the my project is making an app which store the user items in cart and user can modify and delete the added item in list. To develop a reliable system , I have some specific goals such as:

1. Develop a system such that user can add item details like product name, product Quantity and Product Price
2. Develop a database room which is used to store the user data which already added by the user in cart and user can also remove the previous added item in cart
3. Develope the good UI design which user friendly to user
4. Develope the good UI which is supported for all android devices

Background & Diagrams

Background:

Grocery app is a project that will help the user or admin to store the list of items in sequence order. if user want to add extra more items also possible and if user want to remove the previous items also available.

1. ANDROID APPLICATION DEVELOPMENT
2. DATABASE CONNECTION TO STORE USER DATA

2. Studies:

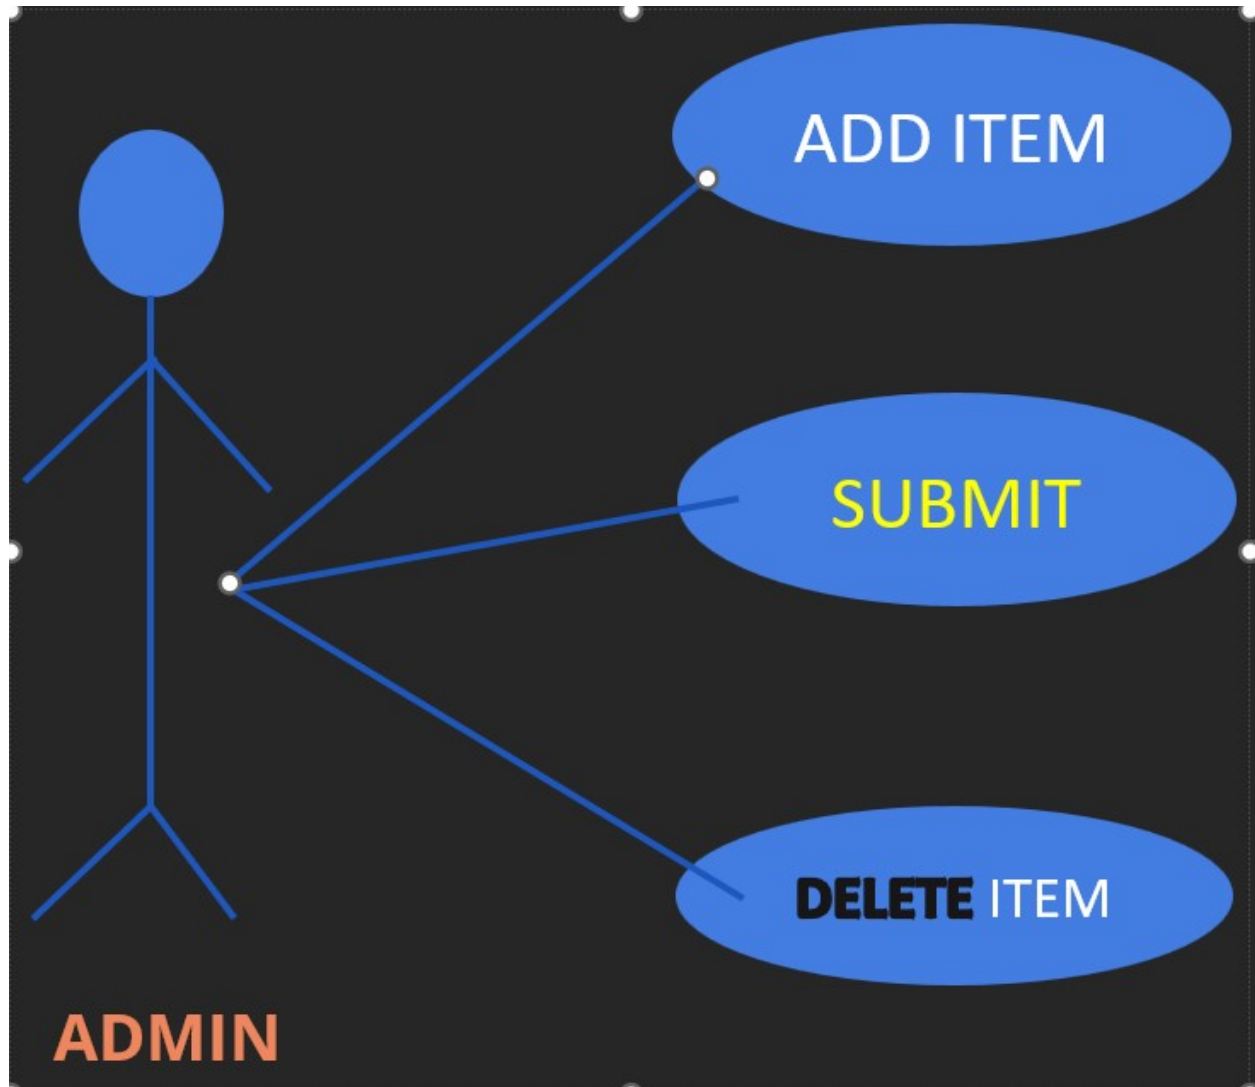

1. Design user friendly environment
2. Connecting database
3. Add material icon for good design
4. Create the vectors and Material Colours
5. Navigation of user action from one page to another page

3. Challenges:

working with database friendly design for Gradle and SDK settings

4. Context Diagram:

Use Case Diagram of Admin

REQUIREMENT OF COLLECTION AND ANALYSIS:

1. SOFTWARE:

The Software Package is Developed Using Kotlin and Android Studio basic Commands Used to Store the Database

Operating System: Windows 11

Software: Kotlin

Emulator: Pixel 5 (Api 30)

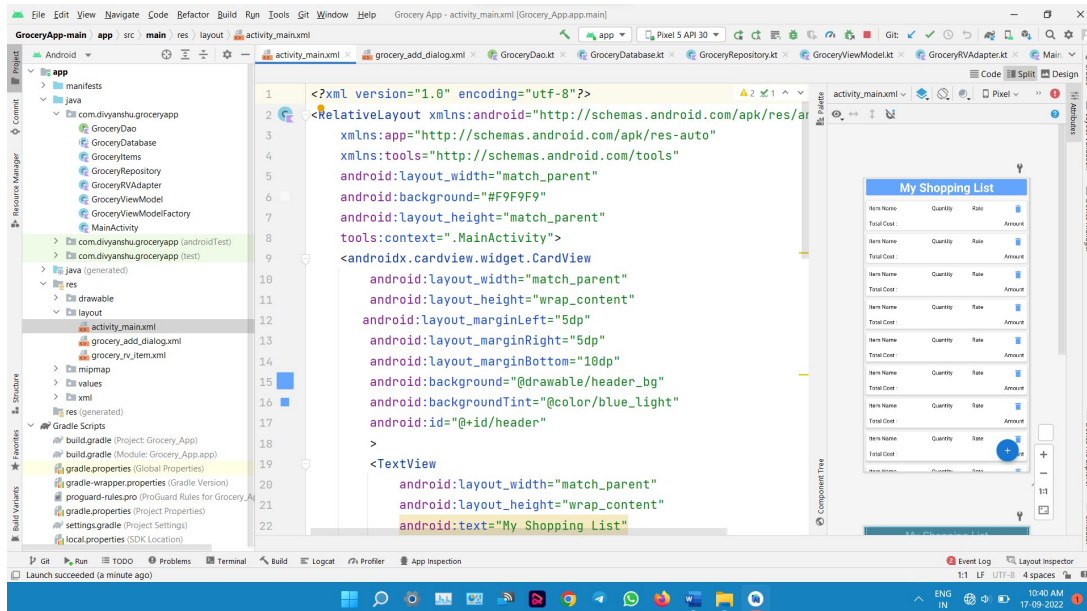

2. HARDWARE:

RAM : 8GB RAM

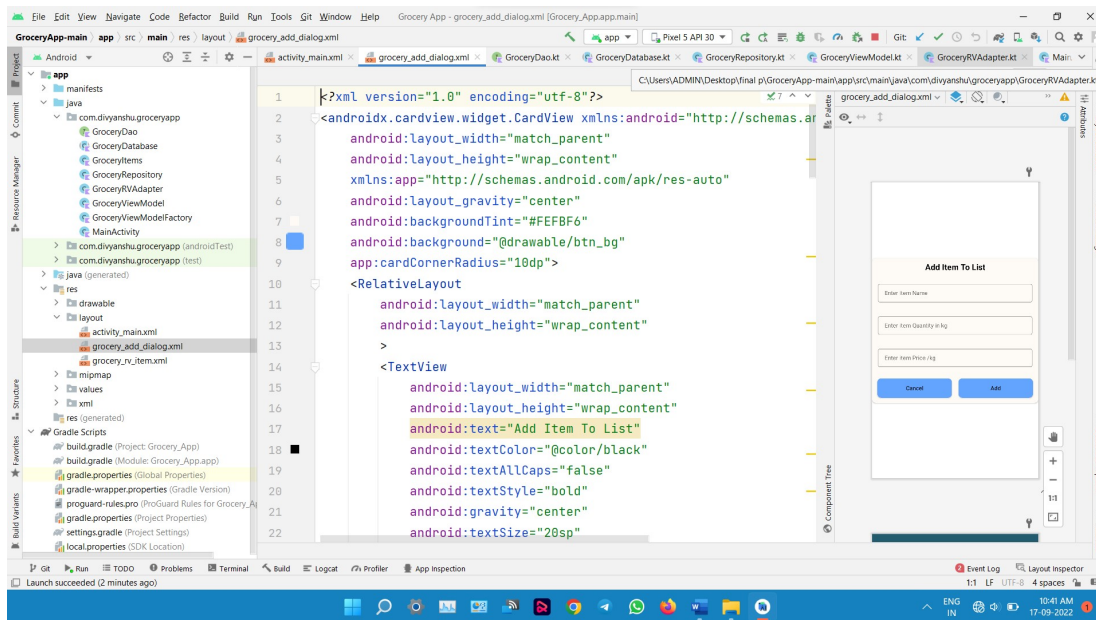

ROM : 20GB

Implementation and Designing

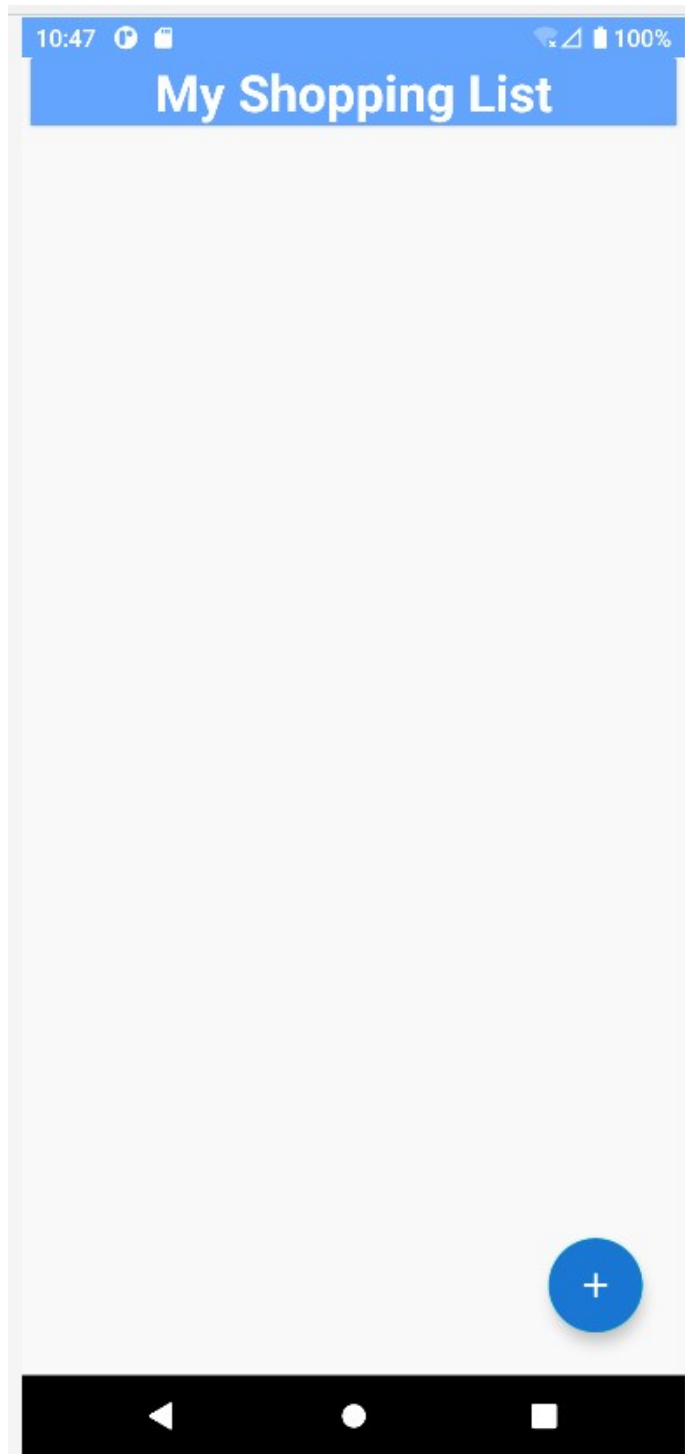

1. HOME PAGE & LIST ITEMS:

2. POP UP PAGE

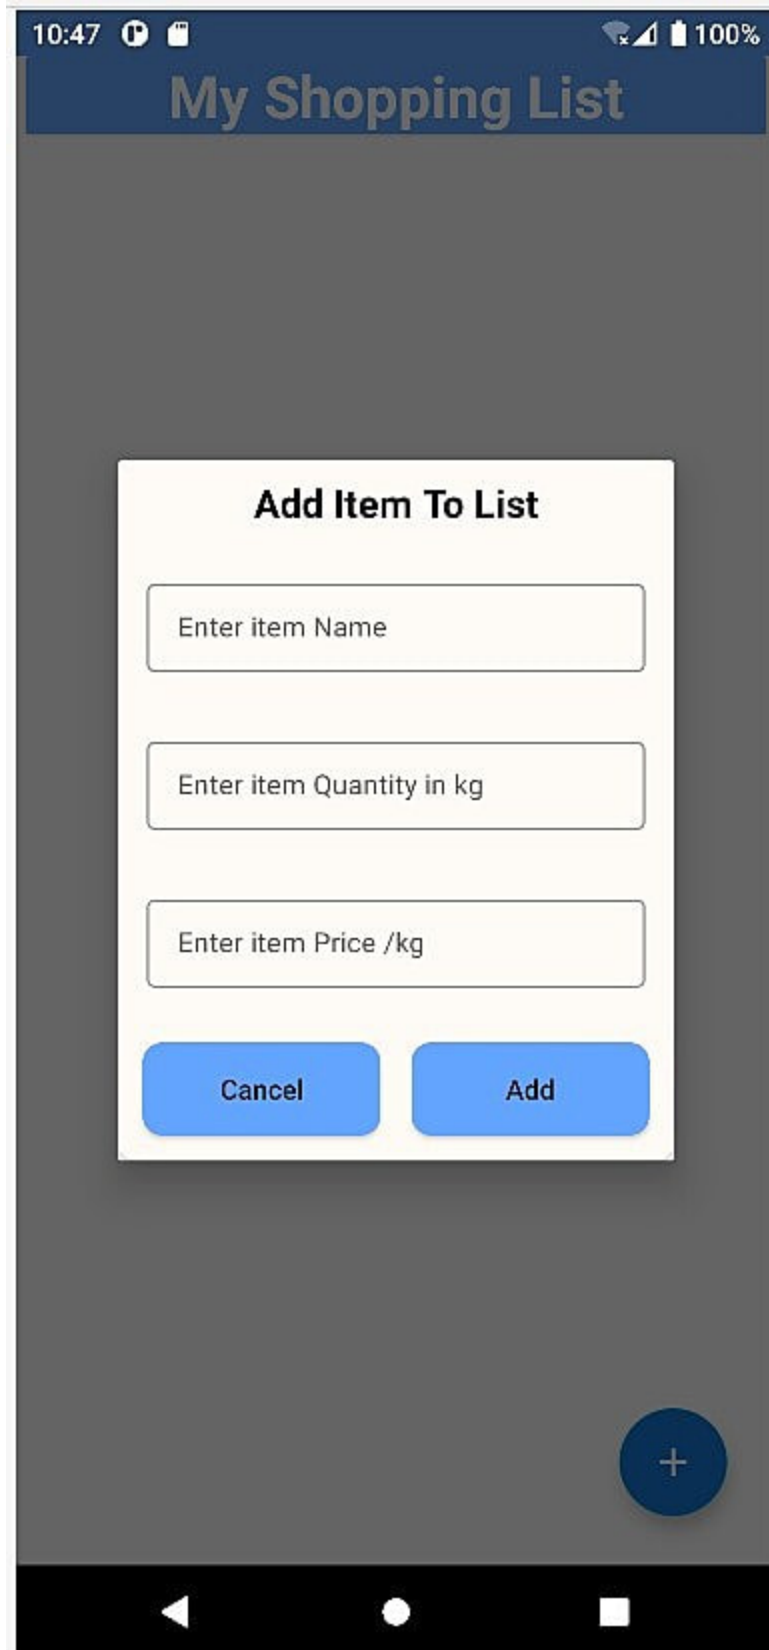

Procedure :

Step 1

**Open the Grocery app
And
Click on plus icon**

Step 2

**This is our add
item list interface ,
fill out this all info**

10:48 100%

My Shopping List

Add Item To List

Enter item Name

sugar

Enter item Quantity in kg

5

Enter item Price /kg

50

Cancel

Add

Step 3

**Finally fill up the
item list**

**Next click on
add button**

And Finally !

**This Type of
Outcome can be
see in our phone**

Conclusion:

This application will help to store the list of items date include name price and quantity. most of shopping admins want to store the his data in list, the application is very help full for them. not only in shops and admins also helpful for user what they buy and what they want to buy.

Future Scope:

This application help to store the list of items by Admin .In Future we can also add user panel which is add by user required item that are submitted to admin
